Coffee sales analysis 6 months performance

- JANUARY-JUNE
- PRESENTATION BY THAKHANI TSHIBALANGADA

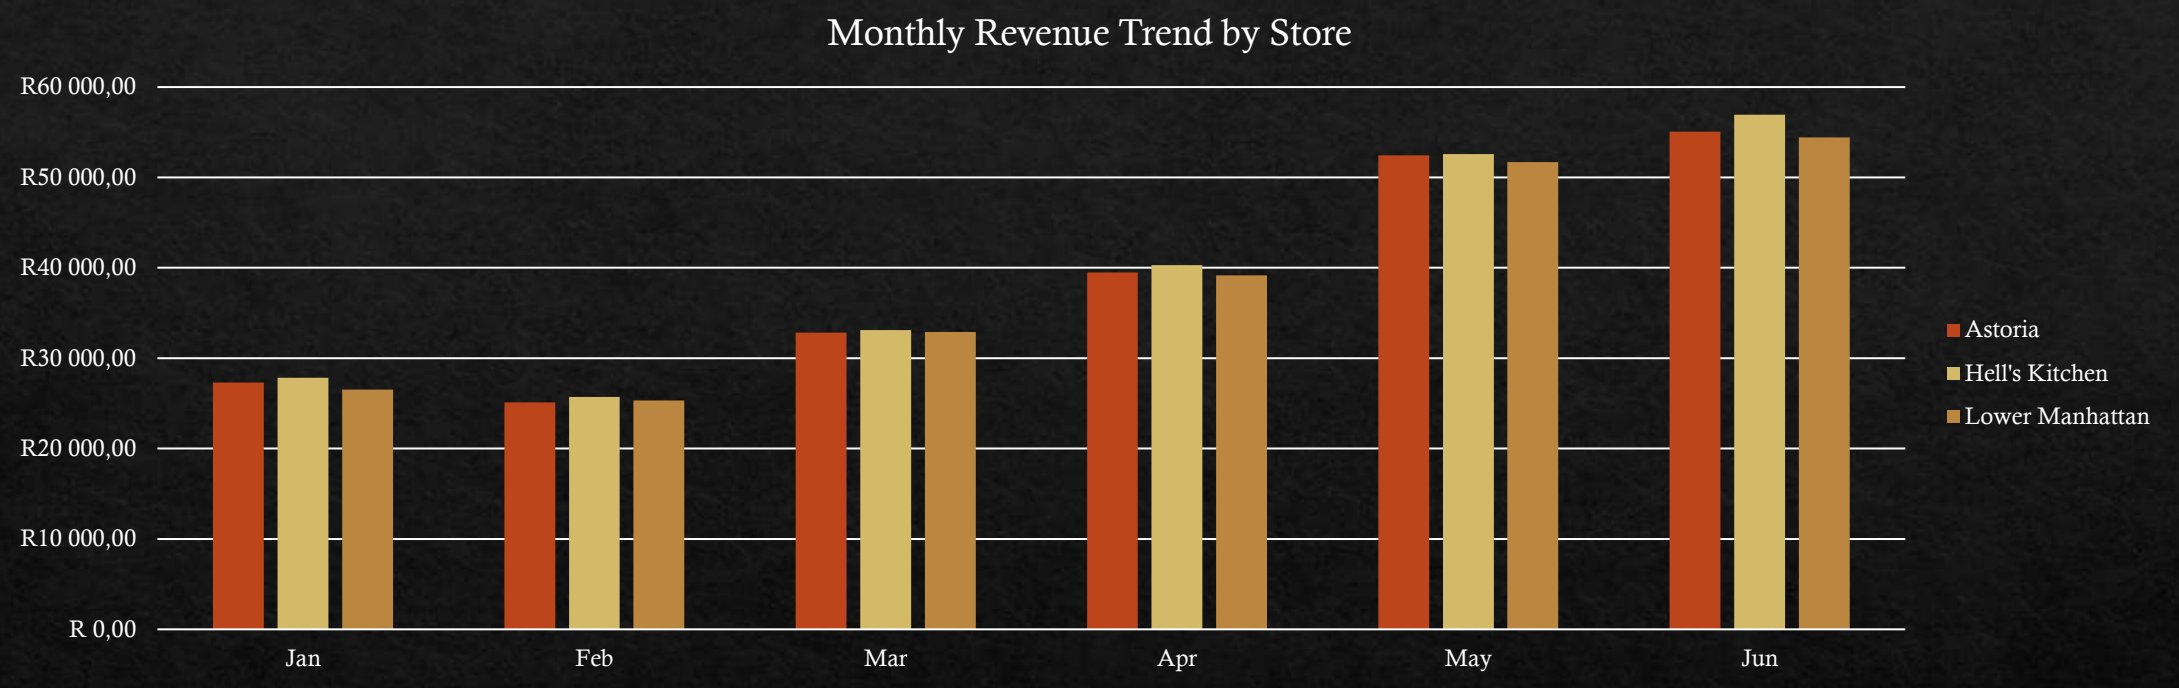
Agenda

- Analyse overall sales performance
- Identify key revenue drivers
- Understand customer purchasing behaviour
- Provide data-driven recommendations

Methodology

- Data processed using SQL in Databricks
- Revenue calculated as: Quantity × Price
- Data exported to Excel for analysis
- Pivot tables and charts used for visualisation

Monthly Revenue Per Store

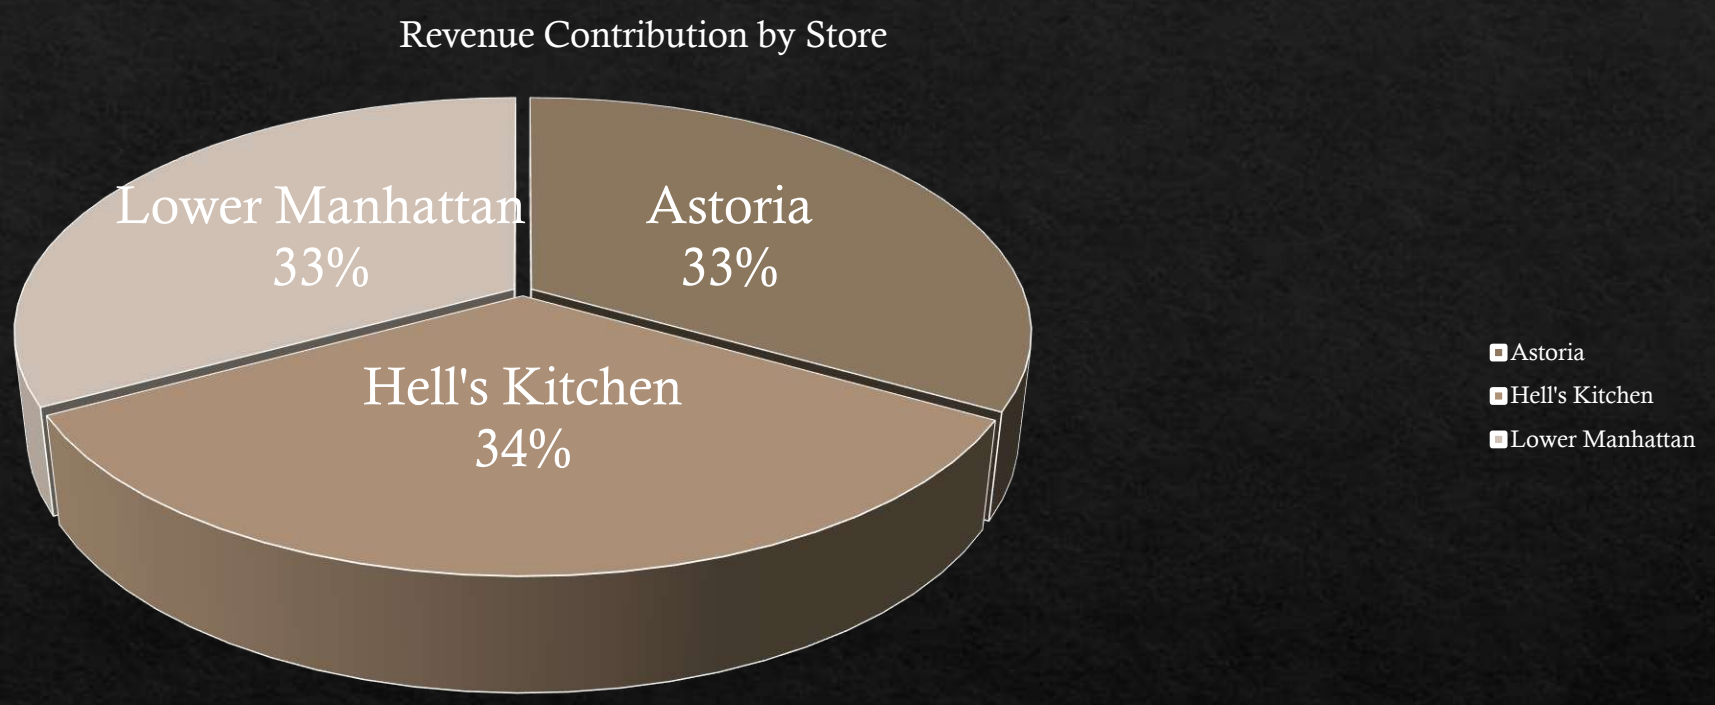


- Revenue increased steadily from approximately **R26,000 in January to over R55,000 in June** across all stores.
- This reflects an overall growth of **more than 100%**, indicating strong upward sales performance.

Store Performance

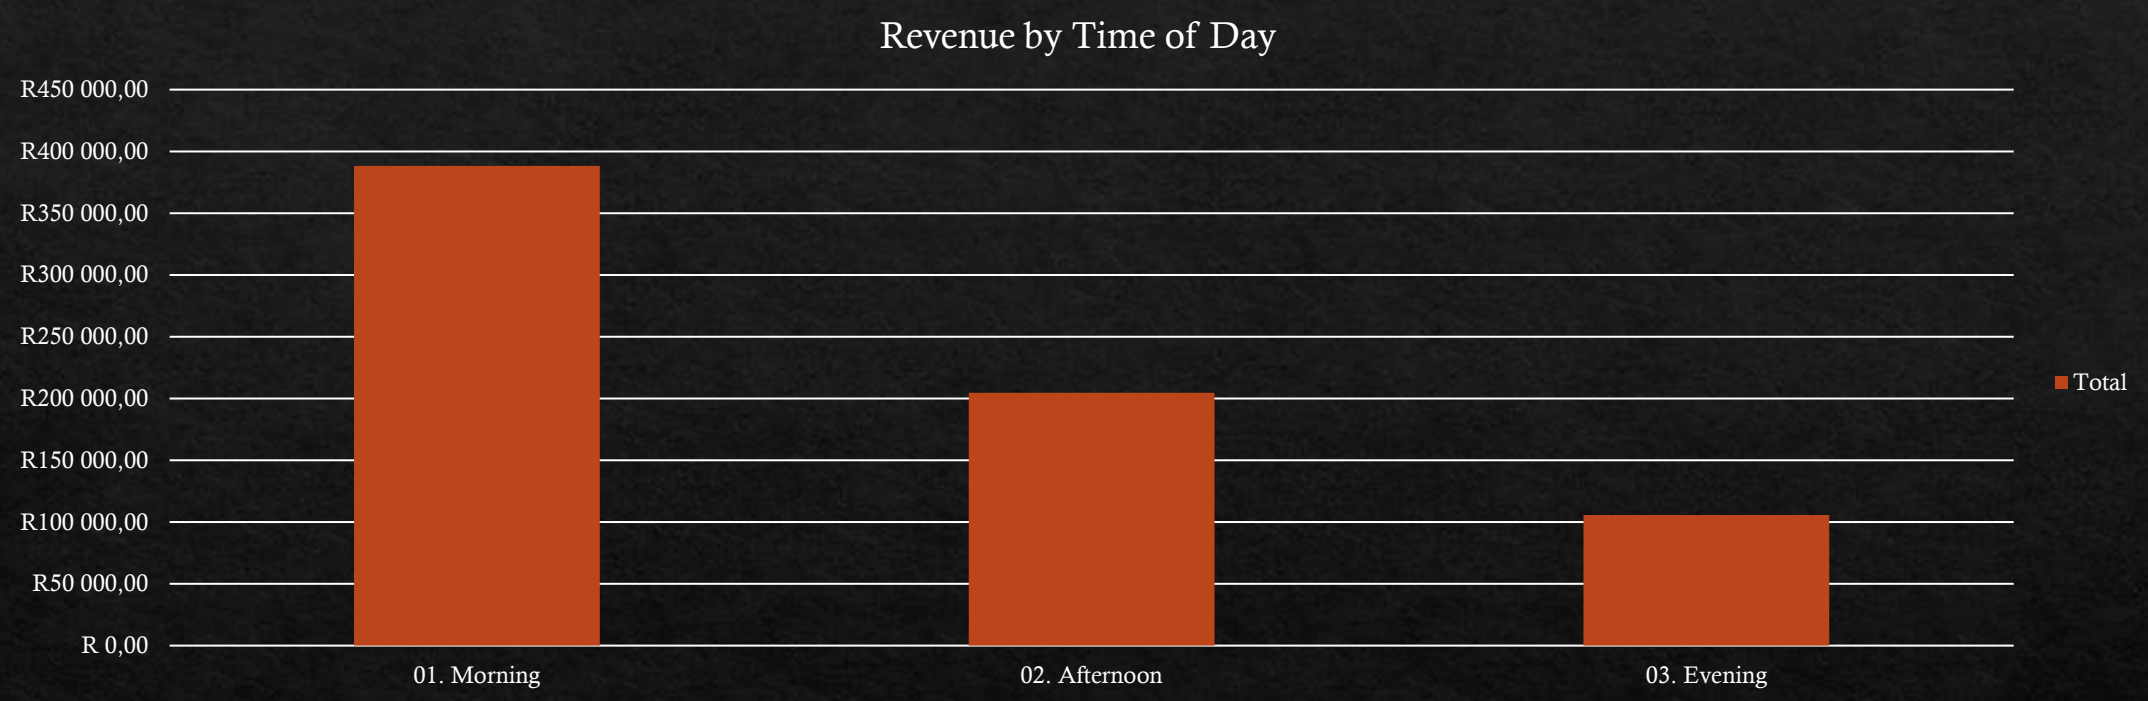
- Hell’s Kitchen recorded the highest total revenue at approximately **R236,511**, followed closely by Astoria and Lower Manhattan.
- The difference between stores is relatively small, indicating balanced performance across locations.

Revenue Contribution



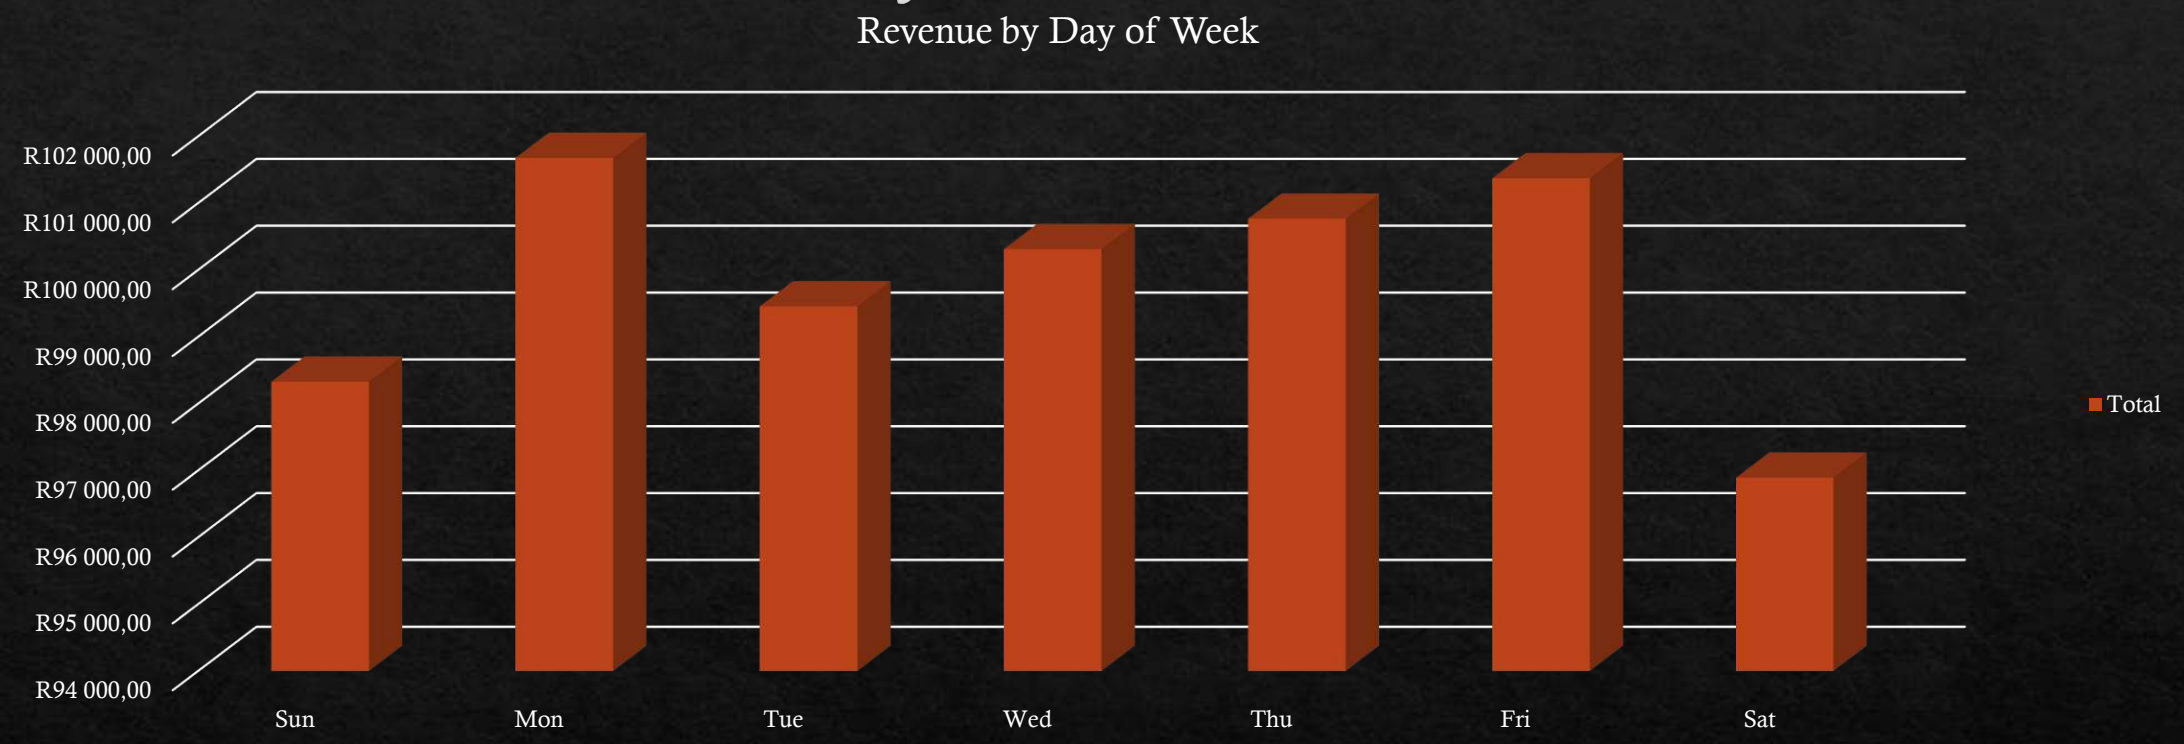
- Insights: Each store contributes roughly 33% of total revenue, with no store dominating significantly.
  This balanced distribution suggests stable multi-store performance and risk diversification.

Time of Day



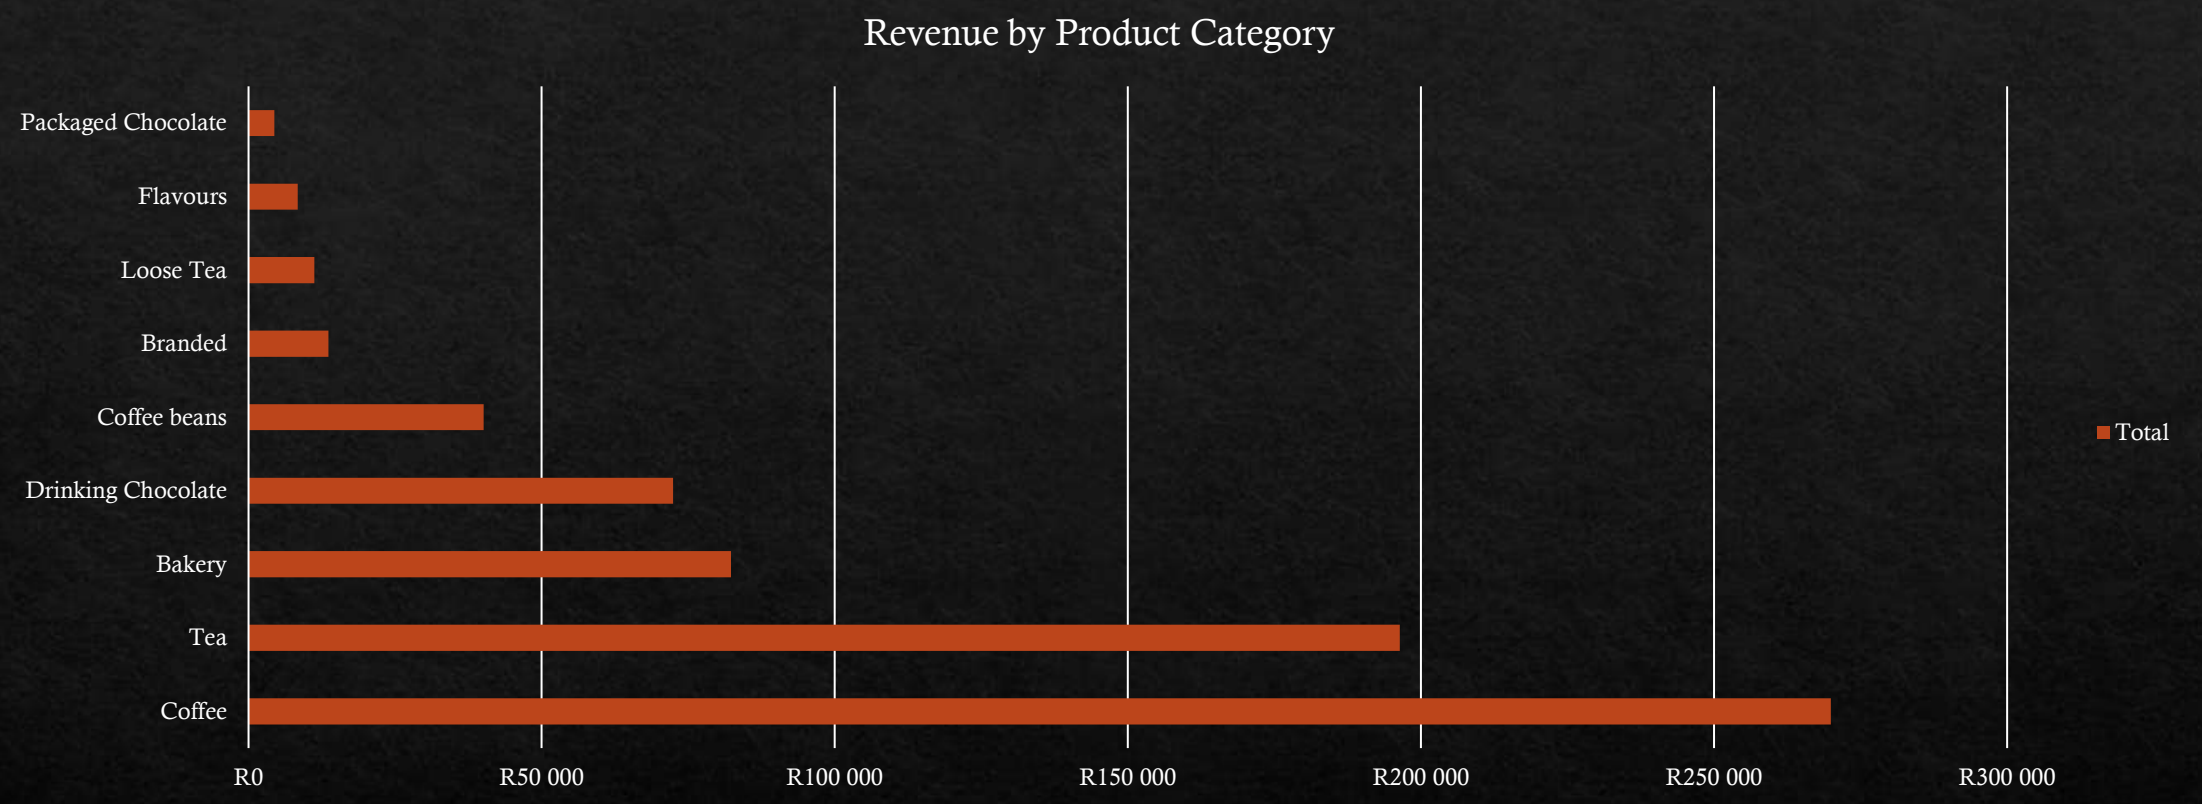
❖**Insights:** The morning period generates the highest revenue compared to afternoon and evening sales.
This indicates peak customer activity during early hours, likely driven by **breakfast demand**.

Day of Week



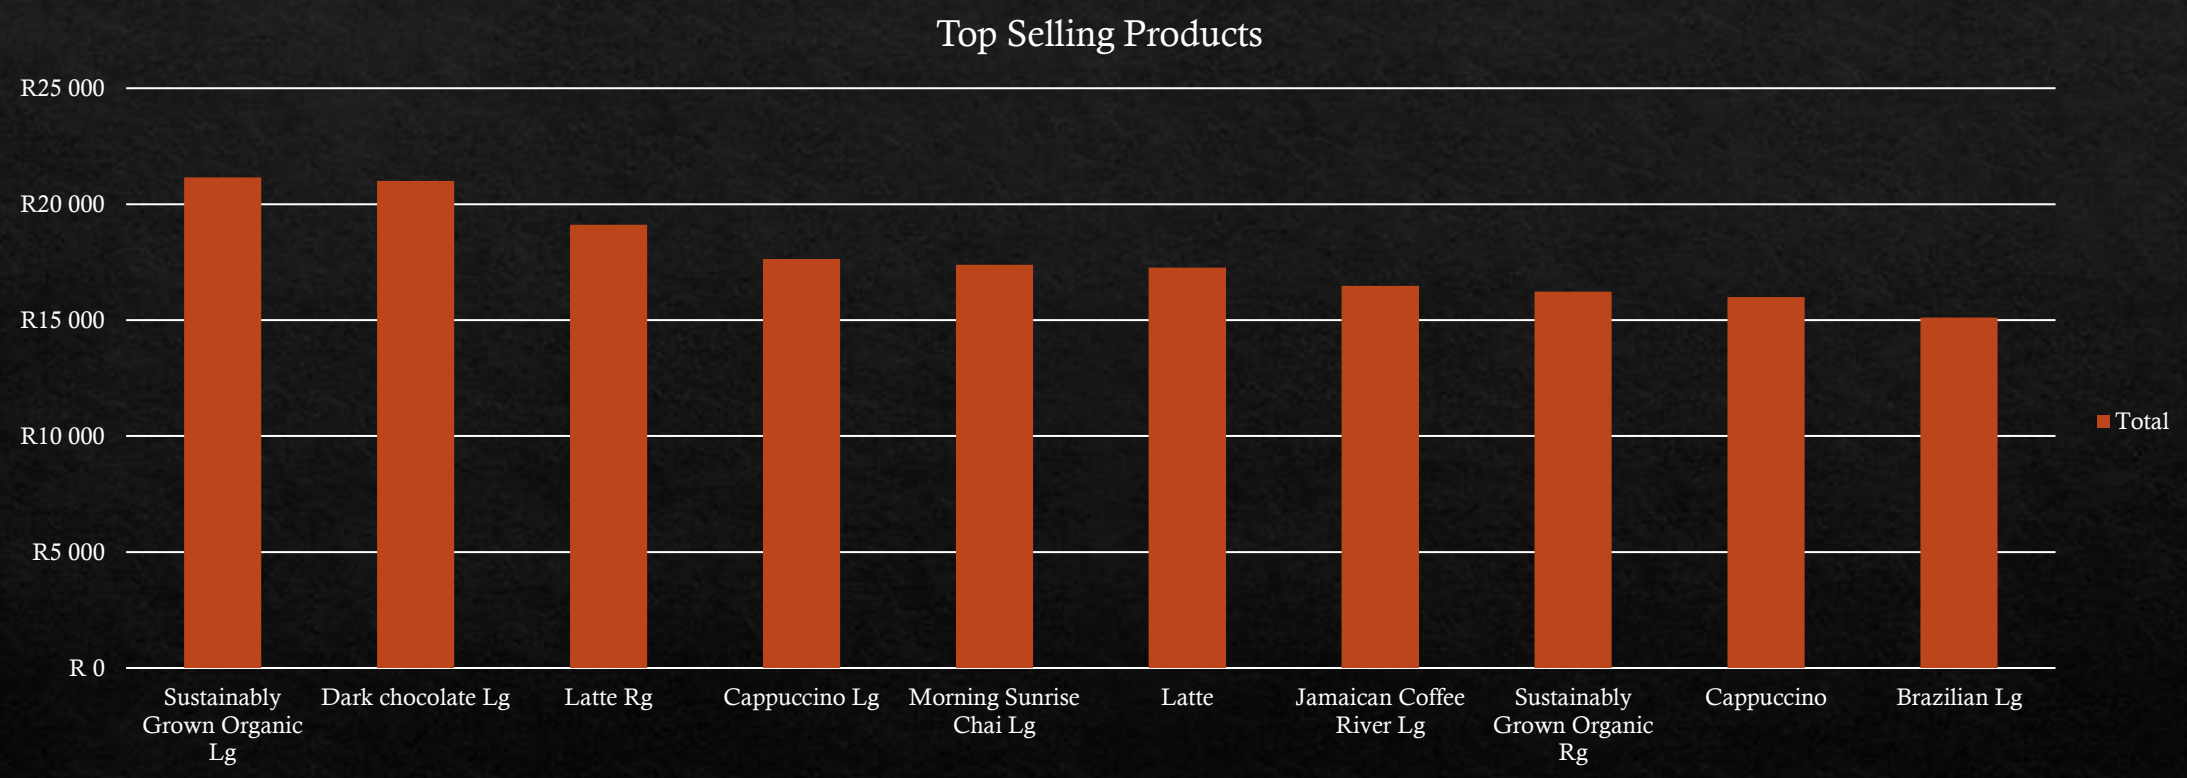
❖**Insights:** Revenue differs between weekdays and weekends, reflecting changes in customer behaviour.
This highlights the impact of work schedules and leisure time on purchasing patterns.

Product Category



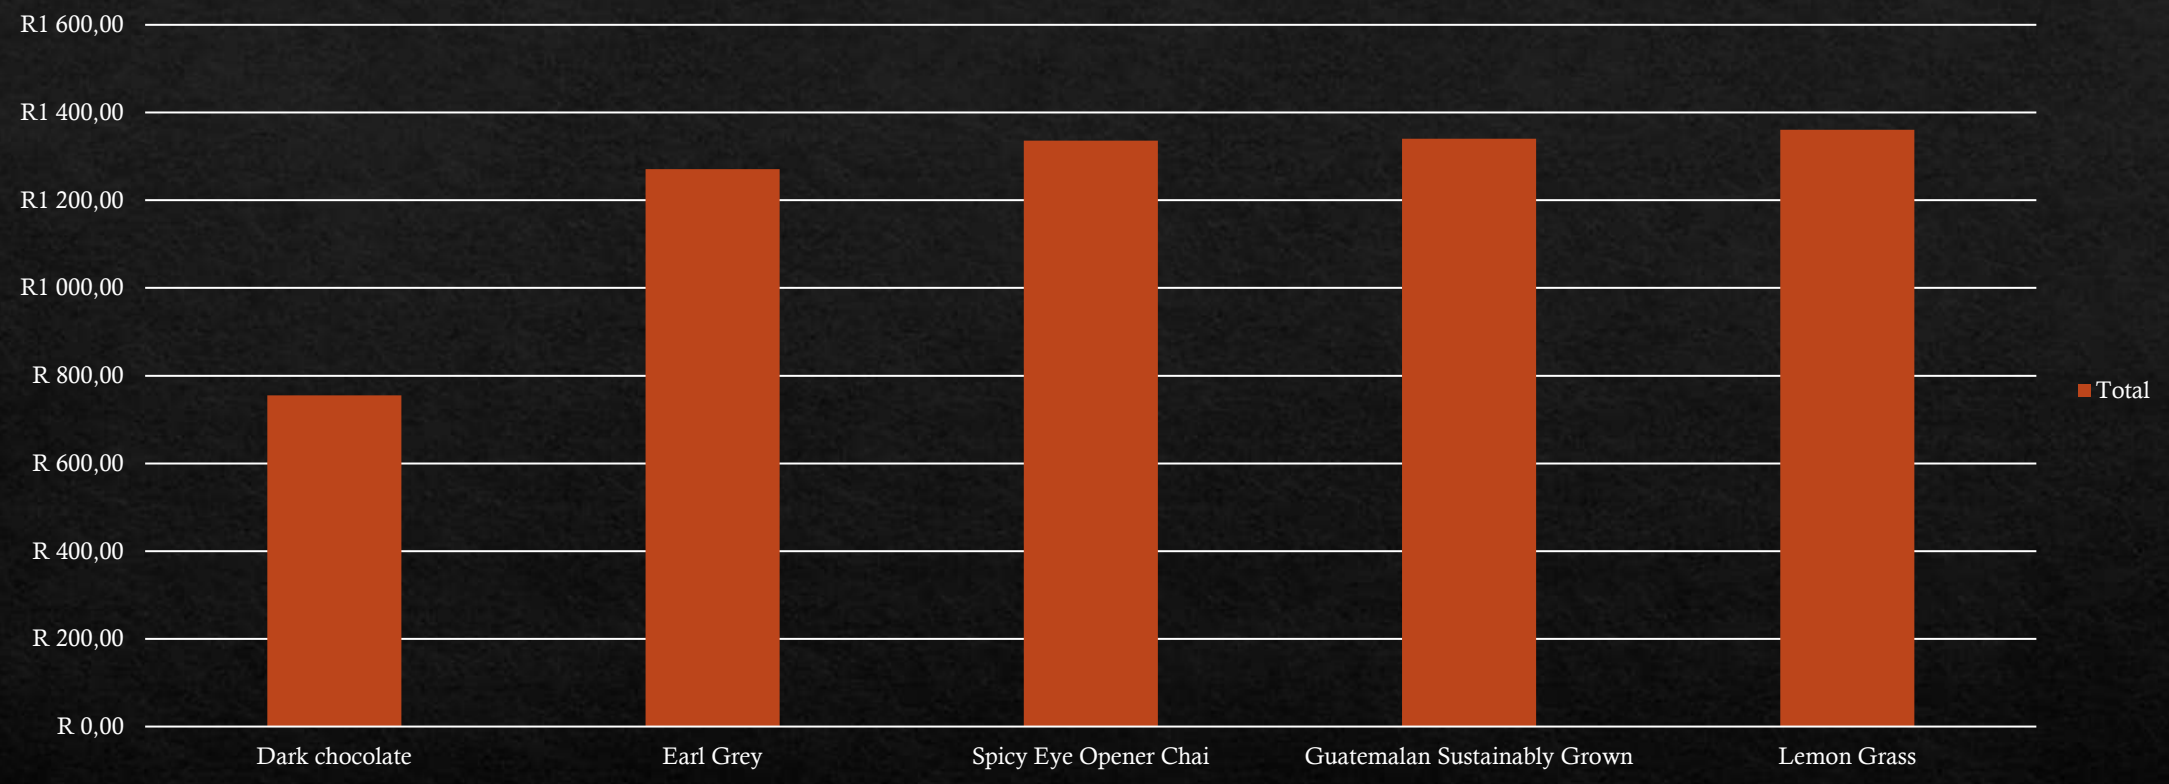
❖**Insights:** Coffee and Tea categories generate the highest revenue compared to other product categories.
This indicates that core beverage products are the main drivers of sales performance.

Top Performing Products



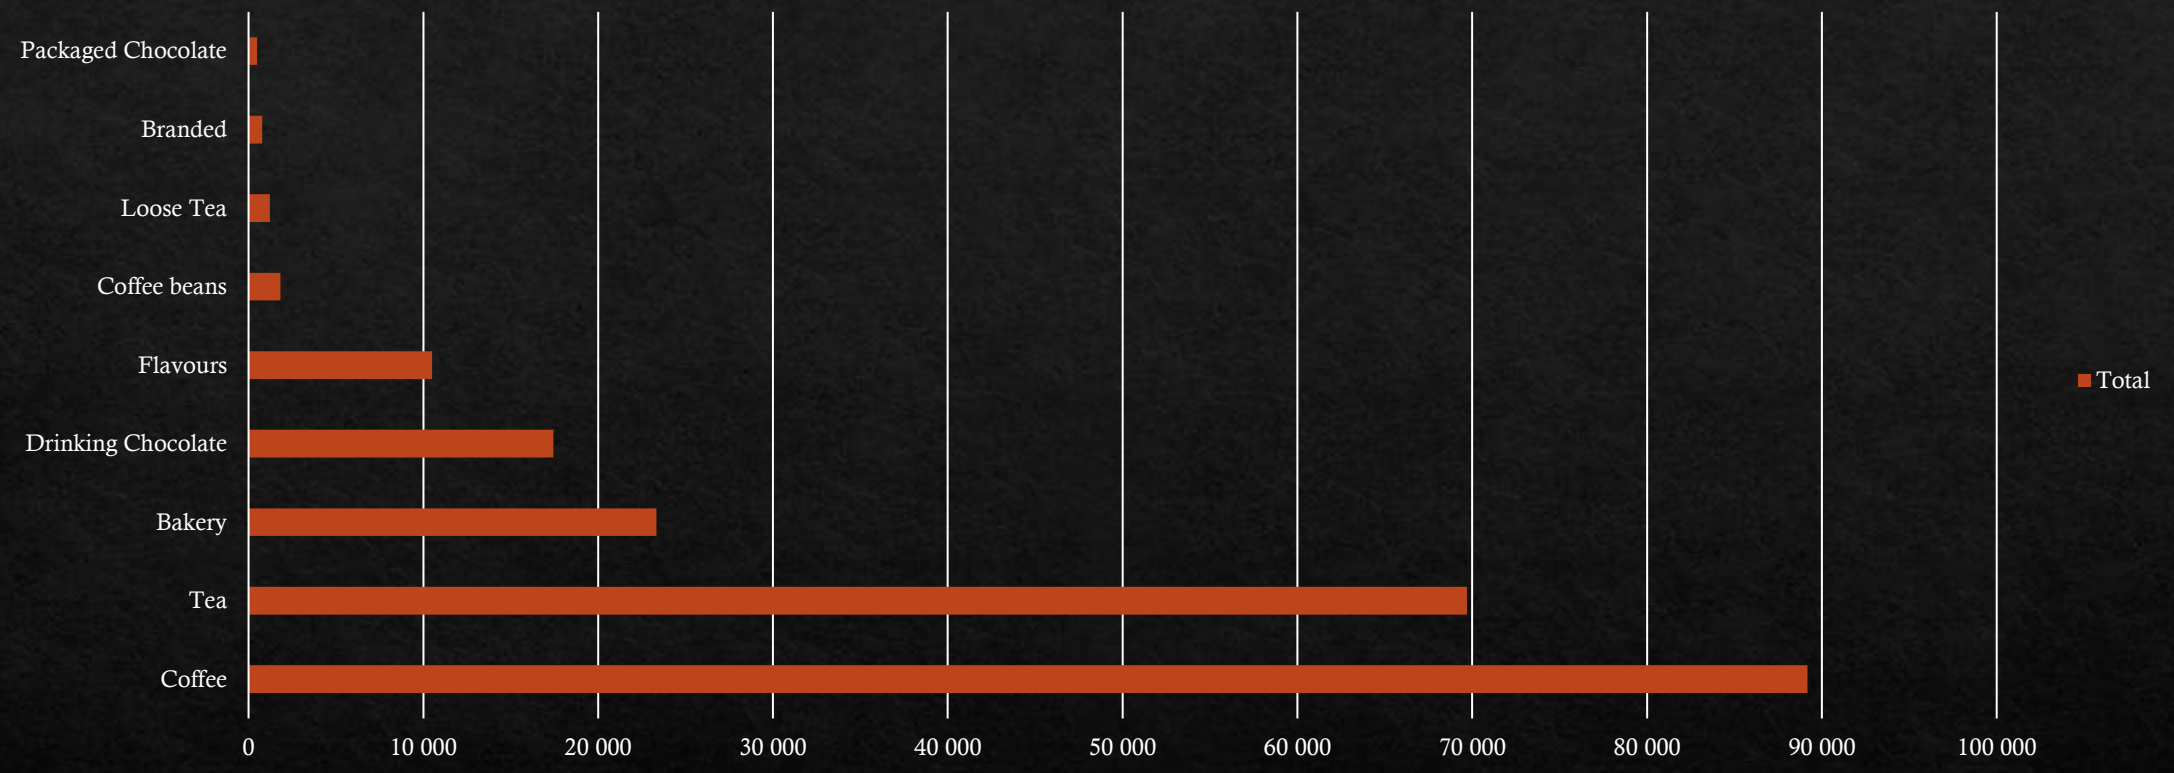
❖**Insights:** The top-performing products contribute a large share of total revenue compared to other items.
This shows that **customer demand is concentrated among a few key products**.

Worst Performing Products



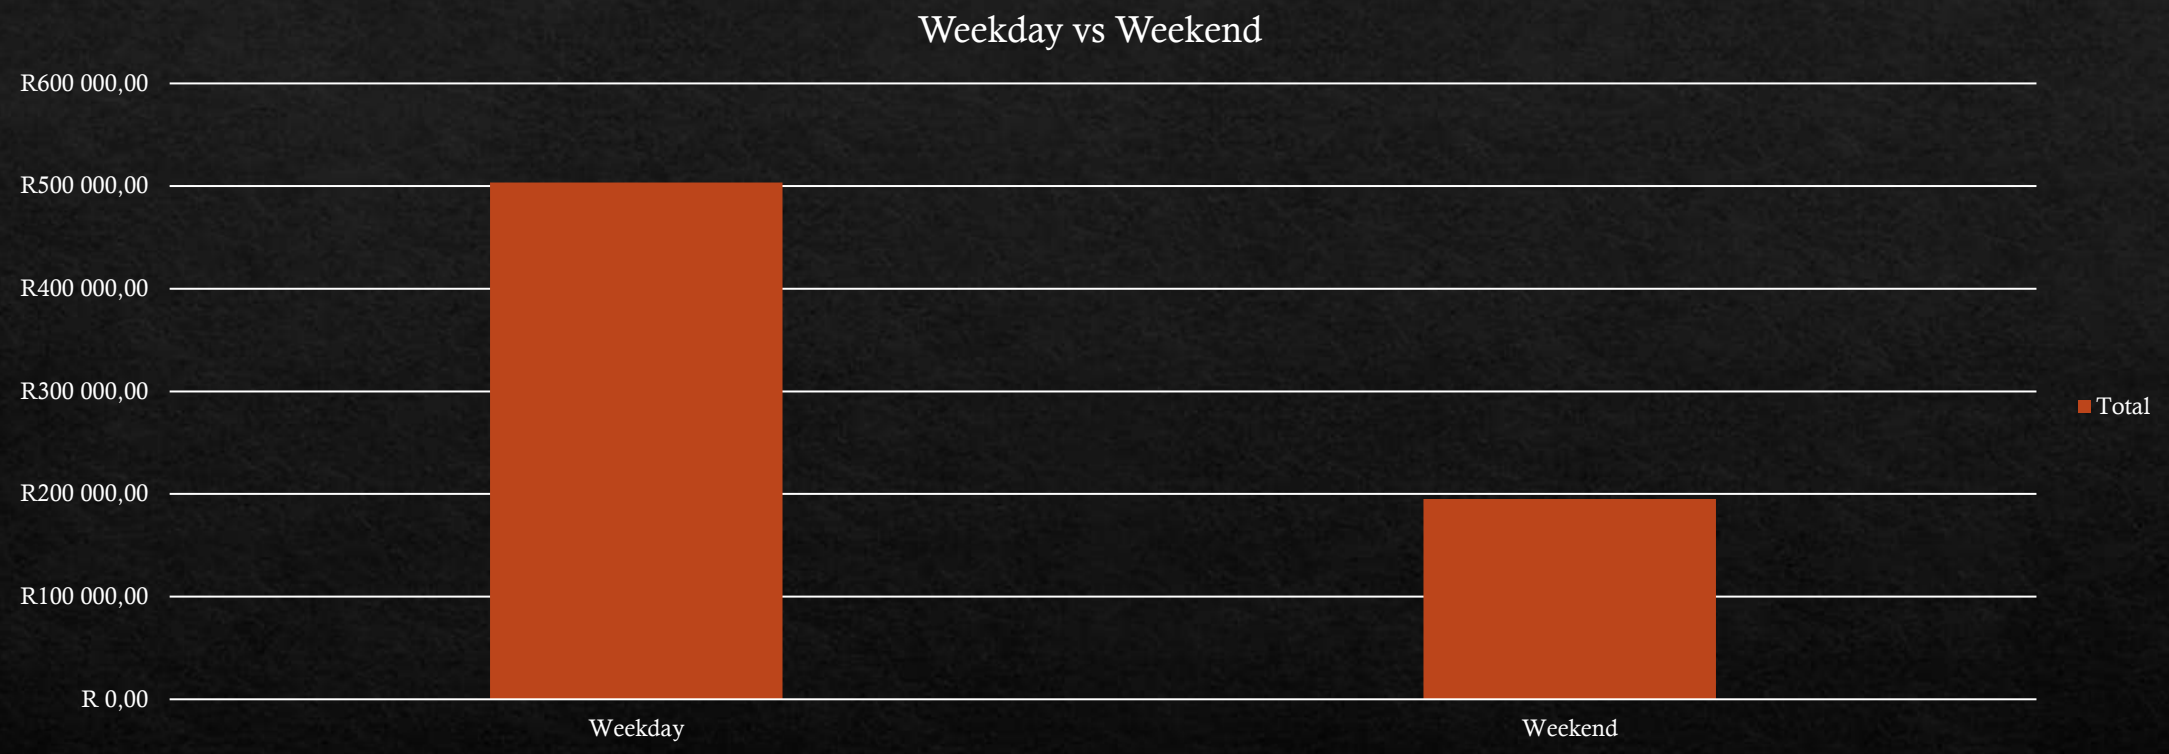
❖**Insights:** The lowest-performing products contribute minimal revenue relative to top items.
This suggests low demand and potential inefficiencies in product offerings.

Quantity Sold by Product Category



❖**Insights:** Coffee and Tea categories record the highest number of units sold compared to other categories.
This indicates that these products drive both volume and revenue, reinforcing their importance to the business.

Weekday vs Weekend



❖**Insights:** Revenue differs between weekdays and weekends, reflecting changes in customer behaviour.
This highlights the impact of work schedules and leisure time on purchasing patterns.

Key Insights Summary

- ❖ Revenue shows consistent growth
- ❖ Morning is the peak sales period
- ❖ Sales patterns vary by day and time
- •A few products dominate revenue

Recommendations

- Increase stock of high-performing products
- Promote underperforming items
- Target marketing during slow periods
- Optimise staffing during peak hours
